

# SPECCO TREATMENT GREEN ROOF INSTALLATION

Specco and Atlantis Green Roof systems offers a complete and proven solution for a range of applications and installations. The main advantage of this system is the advance geocomposite drainage that allows a high compressive strength up to 101t/m<sup>2</sup> ensuring a high quality products that will not collapse or distort if used correctly.

In addition to the strength, the cell resist all ground chemicals and have the ability of remove only the excess water , keeping a perfect amount of moisture on perch. Also, the drainage cell feature water retention cups that provide optimal moisture conditions for growing media.

In terms of short and long terms benefits, a success system consist of a light weight , durable and economical, and quick installation product. Our system have them all and is perfect for the the tropical weather condition of the Island.
